Quick guide: With the *Prototype to Test Template* the prototypes can be defined purposefully. Based on the assumptions to be verified, different variants are defined and one selected. After the idea phase, the ideas are converted into prototypes and tested with real users. Therefore, it is important in the preparation to select the ideas to be tested in the form of an experiment.

Preparation: 	What? <i>Determine the resolution level and what exactly is to be done. Define different prototypes to be built. Often it makes sense to think in alternatives and then decide for one. Sketch possible ideas for a prototype/test.</i>
